

# AHMAD AL-ASWAD

## FULL STACK SOFTWARE DEVELOPER

### Contacts

Linkedin:ahmad-alaswad

Email:ahmad.alaswad.dev@gmail.com

Phone:+971508391865

### Skills

Laravel framwrok

NodeJS

ExpressJs

Flutter framework

ReactJs

Redux

VueJs

Vuex

html

Css3

Bootstrap

PHP

Javascript

Typescript

Dart

### Educations

High School , Al-Hikma High School

Jan/2012

### Projects

#### Careerty

Jan/2022

Careerty is an online digital mentorship platform that also includes an online CV builder with highly customizable features for the CV document . The platform leverages the power of ChatGPT AI model to assist users in building their CVs. This AI model provides personalized advice and suggestions, making the CV building process more efficient and effective.The platform provides one-to-one and many online mentorship formal and informal programs with the help of tools and features in the platform

### Profile

Experienced Full-Stack Web Developer, I specialize in advanced web development across all stages, with a strong proficiency in a variety of technologies. My expertise spans React.js, PHP with the Laravel Framework, Vue.js, and Express.js with Node.js And Typescript, among others. I have a solid background in user interface design, testing, and debugging processes. My ability to manage independently on projects, coupled with my collaborative skills, makes me a valuable asset to any team.

### Experiences

#### Full stack Software Developer , MyBill

Feb/2024-Jul/2024

I spearheaded the creation of a cutting-edge cashback system designed to boost customer loyalty and engagement through rewarding experiences. This comprehensive platform, built entirely from the ground up, integrates advanced technologies to offer a seamless and secure user experience.

- Utilizing Flutter, I developed a high-performance, cross-platform mobile application, ensuring optimal user experience across **iOS** and **Android** devices. The backend infrastructure was crafted using **PHP Laravel**, paired with **MySQL** as the database, to support efficient data management and processing. This choice of technology stack ensures scalability and reliability for the system.
- Key features include a redeem coupon system, streamlined processes for customers and merchants to withdraw balances, detailed reports for merchants, and a multi-model approval system on the control panel to efficiently manage data across the platform.
- To deliver instant notifications, **Firebase Cloud Messaging (FCM)** was integrated for real-time communication with users.
- responsive UI, control panel designed for intuitive and easy management of the platform settings and data. This feature significantly simplifies the administration process, allowing for efficient monitoring and adjustments to ensure the smooth operation of the cashback system.

This project stands as a testament to my capability to conceptualize, design, and execute a complex software solution independently. From idea to deployment

#### Full-Stack Web Developer , Zaheed

Apr/2023-Dec/2023

- Collaborated in a team environment to successfully complete multiple web development projects.
- Developed responsive and user-friendly web applications using **HTML**, **CSS**, **JavaScript**, and **Twitter Bootstrap**, with a focus on **Laravel PHP framework**.
- Built **RESTful APIs** from scratch to enable seamless communication between web applications and external services.
- Managed DevOps tasks, including deployment, server configuration, and continuous integration/continuous deployment (CI/CD) processes.

## Certificates

### Meta Back-End Developer Professional Certificate at Meta With Coursera

Jul/2024-Jul/2024

### Full-Stack Web Developer , Mayar World

Sep/2020-Feb/2021

Web based Services & Services Ordering management Administration system programmed and designed using **laravel framework** with **jquery Ajax**, **Blade template**, and **Twitter Bootstrap** as front-end views, and **Mysql** with **eloquent PDO** driver as database . The following activities were carried out:

- Services Providers content management system (Services,Orders,Categories....etc) with roles employees system
- Services Providers Administration control panel with real Time statistic and charts
- Local payment system support by using **Qr** technology
- **Restful-API** streams Data to Front-end application and Mobile application protected by **JWT** authorization guard Feature
- Connecting to **Paypal Checkout API**
- Connecting to **GCP (DriveAPI)** as Storage files system

### Full-Stack Web Developer , PowerOfLife

Oct/2019-Feb/2020

Web based Point-Of-Sale system programmed and designed using **laravel framework** with **jquery Ajax**, **Blade template**, **Twitter Bootstrap** as front-end views and **Mysql** With **eloquent PDO** driver as database with:

- Multi store feature
- Plans subscription system
- Support many types of retail stores (pharmacy , clothes , etc.....)
- Restaurant support with (waiters ,tables,kitchen ,delivery) management system
- Connected With **Paypal Checkout API**
- Connected With **StripeAPI** as **CreditCard** Payment gate
- Connected With **GCP (DriveAPI)** as Storage files system
